Credit Report - Figma Design Guide

Readable UI structure based on the supplied credit report response

Recommended design approach: Use cards for key metrics, tables for account lists, status chips for account states, a timeline/grid for payment history, and accordions for secondary details. Avoid showing the raw API JSON directly in the product UI.

1. Credit Score Hero Card

Element	Value
Credit Score	837
Score Type	FCIREX Score
Report Date	06 Oct 2026
Report Number	1791279101658
Match Status	Exact Match
Score Status	Excellent, Very Good, Good, Fair, Poor

*Use only the score label approved by your product/business score-band rules. The source provides the numeric score, not the text classification.

2. Credit Overview

Metric	Value
Total Accounts	3
Active Accounts	2
Closed Accounts	1
Defaults	0

Outstanding Balance	Amount
Secured	₹0
Unsecured	₹0
Total Outstanding	₹0

Figma note: Show the four account metrics as compact stat cards in one row on desktop and a 2x2 grid on mobile.

3. Personal Information

Field	Display Value
Name	Tejas Satish Jawale
Date of Birth	12 Oct 1999
Gender	Male
PAN	•••••0638L
Mobile	••••••1899
Email	t••••@••••.com
State	Maharashtra
PIN Code	422010

Figma note: Use a two-column key-value card. Mask PAN, mobile number and email in the customer-facing UI.

4. Credit Accounts - Desktop Table

Lender	Account Type	Credit Limit	Current Balance	Status	Opened
IDFC FIRST BANK	Credit Account	₹1,68,000	₹0	Active	24 Apr 2026
ICICI Bank	Credit Account	₹85,000	₹0	Active	27 Dec 2023
ICICI Bank	Credit Account	₹10,000	₹0	Closed	01 Oct 2023

Mobile recommendation: Convert each row into a separate account card with lender, status chip, limit, balance, past due, open date and a “View details” action.

5. Account Detail Screen / Drawer

Example: IDFC FIRST BANK

Information	Value
Account Number	••••2088
Credit Limit	₹1,68,000
Highest Credit / Loan	₹1,481
Current Balance	₹0
Amount Past Due	₹0
Interest Rate	46.20%
Currency	INR
Open Date	24 Apr 2026
Last Reported	31 Aug 2026

Figma note: Keep empty or technical backend-only fields out of the primary UI. Show them only when they have user value.

6. Payment History

Month	Days Past Due	UI Status
Aug 2026	0	On Time
Jul 2026	0	On Time
Jun 2026	0	On Time
May 2026	0	On Time
Apr 2026	0	On Time

Figma note: A horizontal month-by-month status grid is easier to scan than a dense table. Example: APR ● MAY ● JUN ● JUL ● AUG ●, with “On Time” beneath each month.

7. Credit Enquiries

Period	Enquiries
Last 7 Days	0
Last 30 Days	0
Last 90 Days	0
Last 180 Days	0

Figma note: Use four compact cards or one segmented summary strip.

8. Address Information

Location	PIN

Kamatwada, Nashik	422010
Bavdhan, Pune	411021
Pune area	411033

Figma note: Show one current/reported address by default and place historical/other addresses under a “View all” accordion or drawer.

9. Recommended Figma Page Hierarchy

Section	Recommended UI Pattern
Credit Score	Hero score card with score and report freshness
Credit Overview	Total, Active, Closed, Defaults
Outstanding Balance	Secured, Unsecured, Total
Personal Information	Key-value details
Credit Accounts	Desktop table / mobile cards
Payment History	Month-by-month status grid
Credit Enquiries	7 / 30 / 90 / 180 day cards
Addresses	Current address + expandable history
Report Information	Report date, report number and match status

10. Component Mapping for Figma

Content Type	Best Component
Credit Score	Hero card / gauge
Key Metrics	Stat cards
Account List	Responsive table / cards
Account Status	Status chip
Personal Data	Key-value card
Payment History	Timeline or month grid
Addresses	Accordion / drawer
Detailed Account Info	Side drawer / detail page
Empty Fields	Hide from primary UI

Design principle: The final screen should feel like a fintech dashboard, not a bureau report. Surface only information that helps the user understand their credit profile, and progressively disclose technical details.
