CREDIT SCORE CHECK EXPERIAN (GET OTP) POST

➡ cURL:

```
curl --location 'https://api.finii.ai/genOtp/creditScoreCheckV4' \
--header 'Content-Type: application/json' \
--header 'clientId: {{clientId}}' \
--header 'secretKey: {{secretKey}}' \
--data-raw '{
    "firstName": "Dilip",
    "lastname": "yadav",
    "panNumber": "AXXXXX9E",
    "dob": "19970204",
    "mobileNumber": "XXXXX6687",
    "email": "y.dilipXXXX70@gmail.com",
    "gender": "male",
    "pinCode": "121001",
    "consent": "I explicitly consent to the collection, processing, and verification of my data for authent
}   '
```

➡ Description:

This API initiates a credit score check request with Experian by sending an OTP to the user's registered mobile number. The OTP generated here will be used in the **second step** to verify the user and fetch their credit score details. It requires personal details such as name, PAN, date of birth, mobile number, email, gender, and pin code.

Direct Use Cases

- Generate OTP for credit score verification
- Initiate Experian credit score checks
- Verify user identity before fetching sensitive financial data
- Use in loan or credit application workflows
- Integrate credit check into onboarding processes
- Validate PAN and demographic details
- Enable secure customer verification
- Support financial compliance checks

Indirect Use Cases

- Reduce risk of fraud in lending
- Track credit score application requests
- Ensure data accuracy for financial institutions
- Provide audit trails for credit checks
- Enhance KYC procedures
- Streamline digital lending processes
- Support credit advisory services
- Automate customer onboarding workflows

User Profiles

- Banks and Financial Institutions

- NBFCs and Lending Platforms
- Fintech Companies
- Credit Rating Agencies
- Loan Origination Teams
- KYC and Compliance Officers
- Digital Onboarding Teams
- Auditors and Financial Analysts

➡ **Example response:**

```
{
    "code": 200,
    "message": "SMS sent successfully !",
    "result": {
        "sendOtpResponse": {
            "return": true,
            "request_id": "2hpBi1VDjzExNwarBsYssa25DUN",
            "message": [
                "SMS sent successfully."
            ]
        },
        "token": "af9aede887d18241b620de12f38fa80f:34f537daa182af6ca5330ffedc1d87b4dd412a2f5168577390ba374e3
    }
}
